Foreign Agricultural Trade of the United States

January/February 1989

Sales Information

Foreign Agricultural Trade of the United States is available on a subscription basis. Subscription includes six bimonthly issues, two annual supplements, and monthly updates. Subscription rates are \$20 domestic; \$25 foreign. Send check or money order payable to "ERS-NASS" to:

ERS-NASS
P.O. Box 1608
Rockville, MD 20850

For faster service or more information, call **1-800-999-6779**.

Special Notice

The Omnibus Trade and Competitiveness Act of 1988 requires reporting of U.S. trade statistics in accordance with the International Harmonized System (HS) beginning in 1989. Trade data in HS format will be released by the U.S. Census Bureau beginning March 15, 1989. Changes in statistical coding and commodity descriptions may delay publication of *U.S. Agricultural Trade Update* as well as *Foreign Agricultural Trade of the United States*. We will attempt to construct commodity group reporting categories which will provide maximum comparability with historical data, and release that information to subscribers as quickly as possible.

Digest

Exports Jump \$8 Billion In 1988 (see p. 2). Increased exports of virtually every major agricultural product boosted U.S. agricultural exports by 29 percent to \$37 billion in 1988. Wheat exports climbed 10 million tons and corn exports rose 5.6 million tons. Average export prices for wheat and corn were 28 percent and 18 percent higher, respectively. Increased volume and price boosted corn and wheat exports roughly \$2 billion each in 1988. Exports of bulk products, such as coarse grains, wheat, and soybeans, staged one of their largest year-to-year gains of the 1980's in 1988, climbing \$5.1 billion to \$19.7 billion. High-value exports reached a record \$17.4 billion, supported by record exports of meats, fruits, juices, nuts, and hides and skins.

U.S. Agricultural Imports Reach \$21 Billion In 1988 (see p. 5). U.S. agricultural imports rose 3 percent in 1988 to a near-record \$21 billion. This figure was just \$500 million below 1986 when coffee imports were a record \$4.6 billion, more than 20 percent of total U.S. agricultural imports. Coffee imports totaled \$2.5 billion in 1988. Coffee prices rose 17 percent in December after reports of a smaller than expected Brazilian crop. Coffee, cocoa, and spices dropped among noncompetitive imports (products not grown in the United States). Total noncompetitive imports were 5 percent below a year ago. U.S. imports of competitive products (grown in the United States), such as fruits, vegetables, meats, and grain products, set a record for the fifth consecutive year.

Billion-Dollar Markets Draw U.S. Agricultural Exports (see p. 8). Japan was the top market for U.S. agricultural exports for the past 5 fiscal years, followed by the Netherlands, Canada, the USSR, South Korea, Mexico, Taiwan, and West Germany. Feed grains and products led U.S. exports, followed by soybeans and products, wheat and products, and cotton and lint.

U.S. Trade with Pacific Rim Countries Booming (see p. 13). The United States will continue to be a major agricultural exporter to the developed Pacific Rim countries of Japan, South Korea, Taiwan, Hong Kong, Canada, Australia, and New Zealand. The share of U.S. agricultural exports shipped to these countries rose from 29 percent in 1968 to 39 percent in 1988. Growth in U.S. agricultural exports to these countries exceeded growth in total U.S. agricultural exports over the past two decades. As the East Asian countries of the Pacific Rim accelerate industrialization, and as their diets change and populations grow, they will become even more dependent on imported farm commodities.

Principal coordinators were Thomas A. Warden and Mary L. Fant. Trina J. Duffin and Shirley E. Brown furnished word processing and table formatting support. Editorial support was provided by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economics System Branch, Data Services Center.

Exports Jump \$8 Billion in 1988

Increased exports of virtually every major agricultural product in 1988 boosted U.S. shipments by 29 percent to \$37 billion. One exception, soybean exports, declined 3.5 million tons, but drought-supported prices pushed export value above 1987 levels. Wheat exports climbed 10 million tons and corn exports climbed 5.6 million tons, with prices 28 percent and 18 percent higher, respectively. Increased volume and price boosted corn and wheat export value roughly \$2 billion each. Exports of bulk products such as coarse grains, wheat, and soybeans staged one of their largest year-to-year gains of the 1980's in 1988, climbing \$5.1 billion to \$19.7 billion. High-value exports reached a record \$17.4 billion, supported by record exports of meats, fruits, juices, nuts, and hides and skins.

Relatively robust world economic growth and smaller crops overseas boosted U.S. agricultural exports in 1988. World economic growth overcame the deflationary impact of October 1987's stock market tumble and accelerated to a 3-percent-plus annual growth rate for only the second time in the 1980's. Grain and oilseed production declined in the United States in 1988 as the worst early drought ever recorded struck producing areas. World prices soared as grain production in Canada and Argentina also suffered from poor rainfall. In addition, grain production in the USSR fell by 16 million tons from 1987's 211-million-ton crop.

United States Profits from 30-Percent Rise in Grain Prices

Large grain stocks permitted the United States to profit from higher grain prices despite reduced production. At more than 375 million tons, U.S. grain supplies after the 1988 harvest were roughly double the expected rate of domestic consumption. During 1988, much of the corn and wheat exported consisted of 1987 crops, exported at substantially increased prices after June. The winter wheat crop, largely spared from drought, also helped sustain wheat exports in 1988. Much of the U.S. winter wheat crop planted in late 1987 matured before drought took hold, sustaining U.S. exports as prices climbed during the summer of 1988.

As the prospect of tighter global grain supplies drove world prices higher, the gap between the European Community's (EC) high domestic prices and world prices shrank. This smaller price gap permitted the EC to cut export subsidies which had exceeded \$120 per ton during much of 1987. U.S. EEP bonuses also shrank in 1988. During the first 3 years of the EEP, bonuses on wheat sales averaged more than \$34 per

ton. But, from July to mid-December 1988, bonuses averaged \$19 per ton.

U.S. wheat exports reached 40 million tons worth \$4.9 billion in 1988, with the largest gain in shipments to the USSR. Soviet purchases of U.S. wheat jumped from 4.8 million tons in 1987 to more than 8 million tons, making the USSR the largest single customer for U.S. wheat. China was the second largest customer, purchasing 6.6 million tons compared with less than 2 million tons in 1987. Shipments also increased to India, Pakistan, and Mexico.

U.S. corn exports exceeded 46 million tons worth more than \$5 billion, with the USSR accounting for the largest gain, up 3.2 million tons to 8.5 million. Japan remained the largest single U.S. customer. Corn exports to Japan rose 1.6 million tons to a record 14.5 million tons. Spain and Taiwan increased purchases of U.S. corn. China imported no U.S. corn in 1988, compared with 1.3 million tons the year before. Shipments to Brazil, Egypt, and Belgium also fell.

Soybean Exports Drop

U.S. soybean exports fell from 21.6 million tons to 18.1 million, a switch from the pattern of recent years when soybeans declined less than corn and wheat. However, export value rose \$485 million to \$4.9 billion. Between 1981 and 1987, grain exports declined in both value and volume most years, while soybeans showed a more stable trend. Unlike grains, soybeans are guaranteed duty-free entry to EC markets, and soybeans have been spared the direct impact of large, policy-driven price changes endured by wheat and corn in the mid-1980's. U.S. corn and wheat exports fell from a \$16-billion peak in 1981 to a \$5.8-billion low point in 1986, recovering somewhat since then.

While generally outperforming grains during the 1980's, U.S. oilseed exports have declined in importance in world markets. During the second half of the 1970's, U.S. oilseed area averaged 31 million hectares. Since 1985, it has remained below 30 million hectares. In contrast, the combined oilseed area of Brazil and Argentina (the major competitors on world markets) rose from an average of 14 million hectares to above 20 million. The EC-12's oilseed area likewise climbed over the same period, from 1.5 million to 5 million hectares. As growth in foreign oilseed demand was increasingly met by foreign producers, the share of foreign consumption met by U.S. exports fell from 19 percent during the last half of the 1970's to 14 percent during the 1987/88 marketing year. (*Stephen MacDonald, Commodity and Trade Analysis Branch*)

U.S. Agricultural Imports Reach \$21 Billion In 1988

U.S. agricultural imports rose 3 percent in 1988 to \$21 billion, \$500 million below the 1986 record. The 1986 numbers were skewed, however, by \$4.6 billion worth of coffee imports, which amounted to 21.5 percent of the import total. Coffee imports in 1988 were around more normal levels, amounting to \$2.5 billion, 12 percent of total agricultural imports. Coffee prices rose 33 percent, from \$1.20 per pound in mid-December 1988 to \$1.60 in early January 1989. Noncompetitive imports (products not grown in the United States) fell 5 percent in 1988, led by declines in coffee, cocoa, and spice values. Rubber, tea, and essential oils such as lemon, lime, and rose oils increased.

Competitive imports (products grown in the United States) of \$14.7 billion set a record for the fifth consecutive year. Showing large increases were live cattle, vegetable oils, grains and feeds, fresh and frozen beef, orange juice, processed vegetables, casein, and wool. Pork, tree nuts, and tobacco were among the few commodities to decline.

U.S. feeder and slaughter cattle prices hit record levels, which encouraged imports. As live cattle imports (mostly feeder cattle) from Mexico slowed at the end of 1988, cattle imports from Canada (mostly slaughter cattle) increased significantly. November through January is usually the peak period for cattle shipments from Mexico, the largest supplier of live cattle to the United States, while imports from Canada are spread throughout the year. The Mexican Government attempted to hold down inflation in 1988 by restricting exports of commodities, such as live cattle, which meant light shipments to the United States during the last 2 months of 1988. Cattle imports from Canada, however, reached their highest level since 1982.

Duties imposed on live hogs from Canada were removed late in 1988, spurring more U.S. imports. Live hog imports totaled 836,000 head, their highest level since 1985 (1.23 million head imported, just prior to the imposition of countervailing duties). Pork imports fell as live hog imports grew.

Australia and New Zealand continued to dominate fresh and frozen beef imports to the United States. Canada, Costa Rica, and the Dominican Republic also supplied fresh and frozen beef. Argentina and Brazil have shipped increasing amounts of prepared and preserved beef in recent years. Total prepared and

preserved beef imports came to \$200 million in 1988 compared with \$1.5 billion of fresh and frozen beef.

The increased value of dairy imports resulted from higher prices for casein products. Casein import volume fell 15 percent as a result of the 50-percent price increase during 1988. Approximately two-thirds of all casein imports come from Ireland and New Zealand. Cheese import value fell 2 percent in 1988. Cow's-milk cheese imports are restricted under a country-by-country quota to 242 million pounds (110,000 metric tons). Most cheeses imported by the United States come under these quota restrictions, which have limited annual cheese imports to about 140,000 metric tons. During 1988, cheese imports fell for the third consecutive year to 117,000 metric tons. Western Europe and New Zealand were the largest suppliers of cheese to the United States.

Grain and feed shipments were up 20 percent in 1988 to \$909 million. In 1977, grain and feed import values totaled \$170 million. The annual growth rate during 1977-88 was 16 percent compared with a 4-percent growth rate for all agricultural imports during the same period. Seventy percent of all grain product imports came from either Canada or the EC-12. (The grain and feed category consists of bulk wheat, oats, barley, and rice, and processed products such as pasta, cookies, biscuits, wafers, and breakfast cereals.) Domestic oats production fell 44 percent in 1988, because of drought and low price-support levels, encouraging production of other grains, like barley and wheat. From 1978-85, U.S. oats production averaged 7.5 million tons per year. Since then, production has averaged 4.7 million tons per year. Although oats imports climbed to a record 827,000 tons in 1988, only 8 percent of U.S. oats supplies were imported. Imports of other grains were also unusually high. Wheat imports from Canada reached 434,000 tons, barley imports 255,000 tons, and rice imports over 100,000 tons. Import value of feeds and fodders, mostly mixed animal feeds, rose 33 percent during 1988, mostly due to increased volume.

Imports of fruits and preparations (including juices) climbed to a record \$1.9 billion in 1988, despite the 10-percent growth in U.S. production of citrus and non-citrus fruit crops in 1987. The increased imports can be partially explained by the need for foreign exchange by the suppliers, many of whom were developing countries. Brazil's exports alone, almost exclusively orange juice, accounted for a fourth of the total. Mexico (grapes, strawberries, melons, mangoes, and orange juice), Chile (grapes and apples), Thailand and

the Philippines (canned pineapples), and Canada (apples) were other major exporters of fruits and preparations to the United States.

Vegetable imports are chiefly prepared and preserved products. Canned olives and mushrooms came from the Mediterranean region and from East Asia. Mexico, long America's supplier of winter vegetables, furnished approximately 70 percent of all U.S. fresh vegetable imports, primarily tomatoes, onions, peppers, and cucumbers. Canada provided nearly all the U.S. potato imports (\$45 million). U.S. vegetable import value rose 5 percent in 1988.

Raw cane sugar imports rose significantly in the last 4-5 months of 1988, reflecting the 39-percent increase in the U.S. import quota for 1988. The U.S. price for imported raw cane sugar reached 23.4 cents per pound in July, just prior to the July 22 quota increase. The 1989 U.S. sugar import quota, announced December 15, was set at 1.125 million tons, a 17-percent increase over 1988.

The U.S. International Trade Commission held hearings during September 1988 on eliminating duties on tobacco and tobacco products, but no decisions have been made. Tobacco imports in 1988, primarily burley and flue-cured, totaled 197,000 tons, 12 percent below the previous year. December's imports of tobacco were the lowest monthly total in 18 years.

U.S. imports of wine and malt beverages remained on divergent paths in 1988. Since reaching a record 140 million gallons (530 million liters) in 1984, wine imports have fallen each year since and were 78 million gallons (296 million liters) in 1988. Wine import prices increased about 78 percent during the same period, chiefly because of exchange rate effects. Until 1988, malt beverage (beer) imports had set quantity records in each of the past 21 years. The United States imported 297 million gallons (1.125 billion liters) of malt beverages at \$3.17 a gallon (84 cents a liter) in 1988.

Malt beverage import volume rose 30 percent during 1984-88.

Vegetable oil imports took an unusual turn in July 1988 when the United States began importing significant amounts of soybean oil from Brazil and Argentina. The United States imported a record 1.3 million tons of vegetable oils in 1988, including 144,000 tons of soybean oil and 162,000 tons of rapeseed oil. Olive, palm kernel, rapeseed, and soybean oil imports set records in 1988, as shown in the accompanying chart. (Stephen R. Milmo, *Commodity and Trade Analysis Branch*)

Billion-Dollar Markets Draw U.S. Agricultural Exports

Japan was the top market for U.S. agricultural exports during the past 5 fiscal years (1984-88), followed by the Netherlands, Canada, the USSR, South Korea, Mexico, Taiwan, and West Germany. (All years in this article refer to fiscal years.) More than half of U.S. agricultural export value went to these eight countries. Feed grains and products led in export value, followed by soybeans and products, wheat and products, and cotton. This article compares annual averages of U.S. agricultural exports over the past 5 years with 1988.

Japan Leads Country Markets

Japan bought 21 percent of U.S. agricultural exports in 1988, up from 19 percent during 1984-88. Japan's 1988 purchases were more than triple the value shipped to South Korea, the second leading importer of U.S. farm products. U.S. exports to Japan exceeded \$250 million in each of the following commodities: feed grains, live animals and meat, soybeans, cotton, fruits, hides and skins, wheat, vegetables, and tobacco.

Japan's 1988 purchases of nearly \$7.3 billion of U.S. agricultural products exceeded its 1987 imports by \$1.7 billion. Japan was either the first- or second-ranked market for each major commodity group (exports totaling \$750 million or more) except wheat. Japan substantially increased its imports of U.S. cotton from \$345 million in 1987 to \$553 million in 1988, and live animals and meat from \$765 million to \$1.2 billion. However, Japan's imports of U.S. tobacco slipped from \$319 million to \$263 million, and its imports of U.S. peanuts declined from \$17 million to \$12 million.

South Korea took 6 percent of U.S. farm exports in 1988, up from an overall 5 percent during 1984-88. South Korea advanced from the fourth-ranked market for U.S. agricultural exports to second in 1988 by increasing its purchases of U.S. agricultural products by more than \$500 million to \$2.25 billion. South Korea remained the top market for U.S. exports of hides and skins and the second-ranked market for U.S. cotton.

The Netherlands was bumped from second to third place in total U.S. exports by South Korea in 1988 but remained the top market for U.S. soybeans and products. U.S. soybeans, feed grains, and feeds and fodders constituted 77 percent of U.S. exports to the Netherlands in 1988 and during 1984-88. Many of these exports, however, were forwarded to other des-

tinations. The Netherlands was also the leading initial destination for U.S. peanut exports during 1984-88.

Canada, the fourth-largest market for U.S. agricultural exports in 1988, remained the top market for U.S. vegetable exports and the second-largest market for U.S. fruits and poultry products. Canada was also the second-largest market for U.S. peanuts for the 5-year period and nearly tied the United Kingdom for second place in 1988.

The USSR boosted its purchases of U.S. exports nearly \$1.3 billion, almost triple its 1987 level, and advanced from the 11th-largest market for U.S. agricultural exports to fifth in 1988. During 1988 and 1984-88, the USSR was the top market for U.S. wheat and the second-largest market for U.S. feed grains.

Mexico advanced from seventh place as a U.S. agricultural export market to sixth place in 1988 and ranked sixth for the 5-year period. An important market for U.S. oilseeds and feed grains, Mexico was also the top market for U.S. dairy product exports and the second-largest market for live animal and meat exports in 1988 and during 1984-88.

Taiwan, a large market for U.S. soybeans, feed grains, hides and skins, and cotton, slipped from fifth place in U.S. agricultural exports to seventh place in 1988 and for the 5-year period.

West Germany ranked second for tobacco and first for tree nuts in 1988 and during 1984-88. West Germany dropped from the sixth-largest market for U.S. agricultural exports to eighth in 1988 and for the 5-year period.

Feed Grains and Soybeans Lead Commodity Exports

Feed grains, soybeans, and wheat and products formed 54 percent of U.S. agricultural export value during 1984-88 and 50 percent in 1988. Feed grains and products ranked first overall during the past 5 years with 20 percent of U.S. agricultural export value but fell to second in 1987 and remained there in 1988. Japan, the largest market by far, took more than 26 percent of U.S. feed grain exports during 1984-88 and in 1988. The USSR was the second-largest market during 1984-88 and 1988, taking 14 and 9 percent of U.S. feed grain exports. Algeria advanced to the top 10 U.S. feed grain markets in 1988, rising from 14th place.

Soybeans and products, at 20 percent of total U.S. agricultural export value in 1988, led the other U.S. commodity exports. The Netherlands and Japan (the largest customers) each took around 15 percent of U.S. soybean exports. Taiwan was the third-largest market in 1988 and for the past 5 years. The USSR became the fourth-largest soybean purchaser in 1988, in contrast to its 10th-ranked position during 1984-88.

Wheat and products consistently ranked third among U.S. commodity exports during 1984-88, at 14 percent of total U.S. agricultural export value. The USSR and Japan were the top markets for U.S. wheat, taking 12 and 10 percent, respectively, during the period. In 1988, however, China jumped to the second-largest market, replacing the USSR. Increased U.S. Government assistance in 1988 helped boost wheat exports.

Around 70 percent of U.S. wheat exports involved the Export Enhancement Program (EEP), Public Law 480, or credit guarantees. EEP assisted about 65 percent of the 1988 wheat shipments.

Cotton ranked fourth among commodity exports for the 5-year period, advancing from seventh to fifth in 1988 as U.S. cotton exports regained market share lost to lower priced competitors in 1986. Japan and South Korea remained the leading markets for U.S. cotton.

Among commodity exports that changed significantly from 1987, cottonseed oil gained 101 percent, rebounding from a 1987 drop. Wheat, cotton, and sunflowerseed and oil all gained 50 percent from 1987. U.S. peanut exports fell 31 percent. (*Cecil W. Davison, Crops Branch*)

U.S. Trade with Pacific Rim Countries Booming

Major developed Pacific Rim countries, Japan, Taiwan, South Korea, Hong Kong, Australia, New Zealand, and Canada, are primary markets for U.S. agricultural exports. U.S. agricultural exports to the world peaked at \$43.7 billion in 1981, with these seven Pacific Rim countries accounting for 29 percent.

While total U.S. agricultural exports slid sharply until the 1987 turnaround, exports to the Pacific Rim did not fall as much, reflecting the region's strong economic performance. U.S. agricultural exports to the Pacific Rim dropped about 25 percent to \$9.6 billion between 1981 and 1986, while total U.S. agricultural exports fell 40 percent.

A strong dollar and increased competition with other exporting countries caused part of the drop in U.S. agricultural exports to the Pacific Rim. U.S. farm programs kept prices of cotton too high to be competitive. The dollar and international competition factors offset weak commodity prices and strong economies in the region to create the export downturn during the 1980's.

The Pacific Rim has accounted for about 30 percent of total U.S. agricultural exports since the late 1960's. U.S. agricultural exports to the Pacific Rim fluctuated between 27 and 33 percent of total U.S. agricultural exports. Until the late 1970's, the growth rate of U.S. agricultural exports to the region paralleled total growth in U.S. agricultural exports. This changed during 1978-88. U.S. exports to the Pacific Rim expanded at an annual rate of 5.5 percent, double the growth in total exports. Strong economic growth in the Pacific Rim region and stagnation in U.S. agricultural exports to Europe caused the takeoff in the Pacific Rim's market share.

Between the late 1960's and mid-1970's, the economies of Japan, Taiwan, and South Korea shifted from an agricultural base to an industrial base. Industry has developed more in these countries than in other Asian countries and they have achieved the highest yields in Asia on their limited land for most domestically produced crops. The governments have tried to increase agricultural output and support farmers. However, growth in agricultural production has slowed in recent years, and rising food demands have outstripped gains in yield. East Asian diets have shifted away from rice toward meat and other high-value foods that the region cannot produce in sufficient

quantities. Their economies will rely increasingly on imports to satisfy growing demand for food and feed. Feed grains have been in especially short supply as incomes and demand for meat have grown.

Although the value of U.S. agricultural exports to the Pacific Rim countries stagnated after the early 1980's, the region's share of U.S. agricultural exports increased from 28 percent in 1982 to 39 percent in 1988. The developed Pacific Rim countries replaced Western Europe as the major market for U.S. agricultural exports.

Japan

Japan is expected to remain a major market for U.S. agricultural exports. U.S. agricultural exports to Japan rose steadily from \$898 million in FY 1968 to \$4.2 billion in FY 1978 and jumped to \$7.3 billion in FY 1988. Japan now ranks first or second for its imported value of U.S. wheat, corn, sorghum, soybeans, cotton, tobacco, cattle hides, citrus fruit, beef and veal, and pork and poultry meat. Japan's share of the total value of U.S. agricultural exports rose steadily from 14 percent in 1968 to 15.2 percent in 1978 and to over 20 percent in 1988. The United States has provided more than 40 percent of the total value of Japanese agricultural imports.

The forecast for U.S. farm exports to Japan calls for an increase of about 14 percent to \$8.2 billion in FY 1989. Higher prices for wheat, coarse grains, and soybeans will account for some of the increase. More exports of beef and oranges are also anticipated as a result of the recent U.S.-Japan beef-citrus trade agreement.

Taiwan

Taiwan has been the fastest growing U.S. market in the Pacific Rim. U.S. agricultural exports to Taiwan totaled \$1.6 billion in 1988, double the level of 10 years ago and more than 10 times the level of 20 years ago. Major U.S. agricultural exports to Taiwan are wheat, corn, soybeans, cotton, tallow, hides and skins, and tobacco. U.S. exports to Taiwan ranged between \$121 million and \$729 million during 1968-78. Taiwan became a major market for U.S. agricultural commodities during the early 1980's. Since 1968, U.S. agricultural exports to Taiwan have grown nearly 14 percent per year.

U.S. agricultural exports to Taiwan may increase from \$1.5 billion in FY 1988 to \$1.6 billion in FY 1989. Higher prices for bulk commodities account for the projected higher export value. U.S. exports to Taiwan of high-value products, such as beef, turkey meat, fruit

and vegetable preparations, and meat preparations are expected to continue to grow.

South Korea

South Korea has been the Pacific Rim's second best customer for U.S. agricultural exports for the past 20 years. Rising consumer income, modernization of South Korean society, and market development efforts led to increased demand for all agricultural products. South Korea is a major importer of corn, wheat, soybeans, cotton, cattle hides, and inedible tallow. Most U.S. agricultural exports to South Korea remain bulk commodities.

Exports rose steadily from \$177 million in 1968 to just above \$1 billion in 1978 and reached a \$2.2-billion record in 1988. U.S. agricultural exports to South Korea grew at an annual rate of over 13 percent during the past 20 years, a rate only slightly behind Taiwan's. South Korea is slowly liberalizing its agricultural markets as it attempts to balance domestic interests against large trade surpluses, especially with the United States. U.S. agricultural exports to South Korea may reach \$2.5 billion in FY 1989, about 11 percent higher than in 1988.

Hong Kong

Because of its limited land area, Hong Kong must import nearly 95 percent of its food and raw materials. The United States is the largest provider after China of agricultural products to Hong Kong. Major U.S. farm exports include wheat, poultry meat, citrus fruits, vegetables, cotton, and tobacco. Growth in U.S. agricultural exports to Hong Kong averaged 9.6 percent per year, with exports increasing from \$78 million in 1968 to \$488 million in 1988. U.S. wheat exports to Hong Kong in FY 1988 were up by 39 percent, and tobacco exports increased 36 percent in value.

U.S. FY 1989 exports to Hong Kong could increase 12 percent to about \$550 million. Healthy economic growth and higher U.S. export prices for some commodities, including poultry meat, wheat, fruits, and vegetables, will bolster the value of U.S. exports to Hong Kong in FY 1989.

Australia

The United States exports less to Australia than to most other Pacific Rim countries. The United States

imports far more farm commodities from Australia than it exports. U.S. exports to Australia have been going up, from about \$30 million in 1968 to more than \$120 million in 1987, although exports dropped in 1988. The main U.S. commodities exported to Australia are fruit and vegetable preparations, nuts, tobacco, and field and garden seeds. Australia, a major U.S. competitor in the Pacific Rim, does not import large quantities of U.S. agricultural products.

New Zealand

New Zealand, like Australia, imports far less in farm commodities than it exports to the United States. Imports of U.S. agricultural products grew sharply, from \$7.5 million in 1968 to a record \$69 million in 1987, although, like Australia, imports from the United States fell sharply in 1988. Major U.S. export commodities are thoroughbred horses, fruit and vegetable preparations, oilseeds and products, and tobacco.

Canada

U.S. agricultural exports to Canada have been growing an average 6.7 percent per year during the past two decades. Major U.S. commodities exported to Canada are beef and veal, pork, poultry meat, rice, corn, fruit and vegetable preparations, oilseed products, tobacco, cotton, and seeds. Exports rose sharply from \$543 million in 1968 to \$2 billion in 1988, about matching the previous high (1981). U.S. trade with Canada is expected to climb faster once some trade restrictions are eliminated under the U.S.-Canada Free Trade Agreement. (Official U.S. statistics substantially understate exports to Canada because of undocumented shipments.)

The forecast for U.S. agricultural exports to Canada remains at about \$2 billion in FY 1989. A stronger Canadian dollar will benefit some U.S. shipments. Higher prices for many U.S. agricultural commodities, such as beef and veal, poultry meat, cattle hides, rice, fruits and vegetables, oilseed products, and cotton will also boost export value. However, Canadian economic growth, which was very strong in 1988, may slow in 1989, causing U.S. exports to remain steady. (*Amjad Gill, Developed Market Economies Branch*)

Table 9--U.S. agricultural exports to major Pacific Rim countries

Region/country	FY 1968	FY 1978	FY 1988	FY 1989 forecast
